## The Need for Training

Recent studies have shown that young people are the most vulnerable category of cybercrime attacks, where some recent studies have indicated that 80% of which have been subjected to attacks are under the age of 15 years. And more than 18% of children who have been subjected to harassment, may have been subjected via the Internet. Our society has become threatened by many dangers, especially moral threat that exploits this category teenage tempting them a lot of porn sites, and intellectual ideas which broadcasts poisoned aiming to sabotage the safe communities. Therefore, it was necessary to rehabilitate the parents in the field of computer security through training on special applications to help protect them from the bad use of this accelerated electronic revolution.

## Course Outline

- General Introduction to Information Security.
